NETWORK TRANSFORMATION SP-SDN, NFV AND CLOUD SOLVE KEY CHALLENGES

Cost and Time Pressure drives Innovation

Ever increasing number of devices

Ever increasing bandwidth demand

Complexity

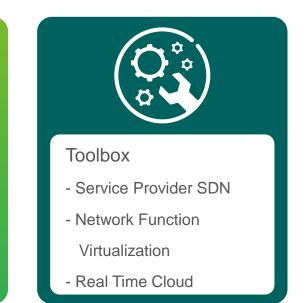

New revenue streams required

Simplification

Flexibility

Time to Market

Increase Flexibility

Manage the Transition

CHALLENGE & SOLUTION

THE CHALLENGE

- Service Personalization leads to increased Cost and Complexity
- Where is the sweet spot of being a Smart operator
- Non SDN "service chaining" is often Inefficient, or Subscriber-unaware & Static

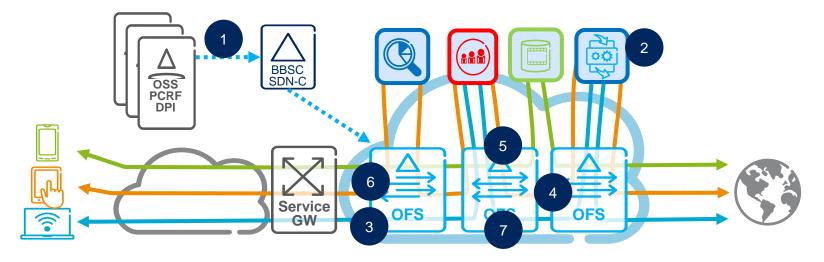

THE SOLUTION

- Per Destination amazon.com **Network Behavior** SDN Controlled Off-Net **OTT-Specific** On-Net പ്പ Per Subscriber Residential, Enterprise Package Fixed/ Mobi $\vdash \sim \sim$ Performance QoS KPI Health 0 **Per Application** Business Interactiv Service Multimedia
- Service Chaining allows Real Time, Dynamic, Low Complexity and Scalable Service Personalization
- > The Results
 - Service Deployment in Minutes
 - Operational Simplicity
 - Carrying live traffic today

THE SOLUTION ERICSSON SERVICE CHAINING

- 1. Open interfaces
- 2. No dependencies on VAS
- Able to discriminate also on L4-7
 characteristics
 7.
- 4. Integrated load balancing and fast failover
- 5. Embedded traffic classification
 - Dynamically switching traffic between different chains
 - 7. Can be physical or virtual OFS

New Capabilities

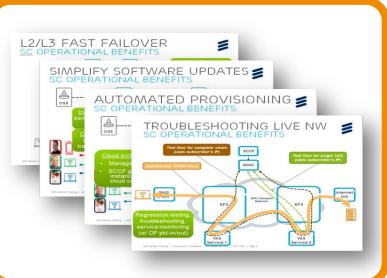

- > Only the video sites go through the video optimization
- > Potential enhancement to the NFV PoC using MSP as video optimization platform
- > Supporting subscriber based and destination based Video Optimization

SERVICE CHAINING

IT INFRASTRUCTURE VIRTUALIZATION BARRIERS & OPPORTUNITIES

Operators

- > Revenue growth opportunity from
 - Cloud as a Service
 - Networking-aaS
 - Infrastructure-aaS
 - Software-aaS
 - BYOD
- However limited ability to service enterprise customers
 - Logistics & scalability of current model of service
 - Significant delay to deploying new services
 - Competing against OTT cloud providers offering "similar" services

SMEs

- Owning an IT infrastructure is just expensive (e.g., high number of small branches)
- For fast growing startups, requirements change and scaling is hard with "box solutions"
- "Try and Buy" is compelling but can be too complicated
- Don't have the time and resources to setup and maintain IT infrastructure

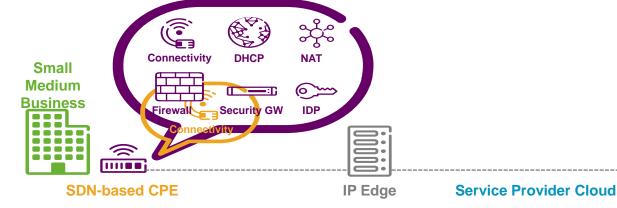

VIRTUAL ENTERPRISE SOLUTION BENEFITS

- > Operator reduces cost for CPE
- Enterprise outsources IP, Communication Services and Enterprise Applications to best-in-class provider
- > Builds on Ericsson competence in Cloud, NFV and SDN
- > Operator moves up in the value chain + Lock-in effect

Enterprises are becoming more mobile

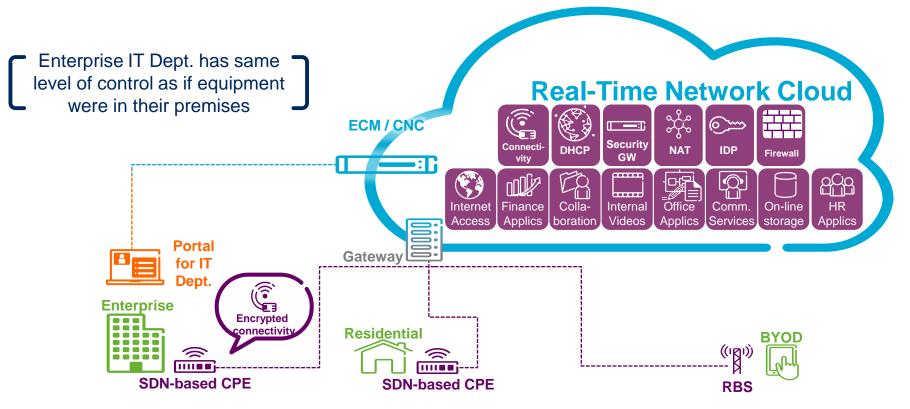

- Enterprises want and need cloud services
- IT seen as a cost & many are using
 - alternatives

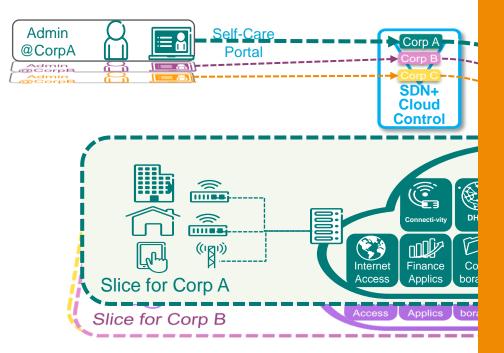

ENTERPRISE VIRTUAL GATEWAY ARCHITECTURE OVERVIEW

VENTERPRISE SOLUTION ARCHITECTURE OVERVIEW

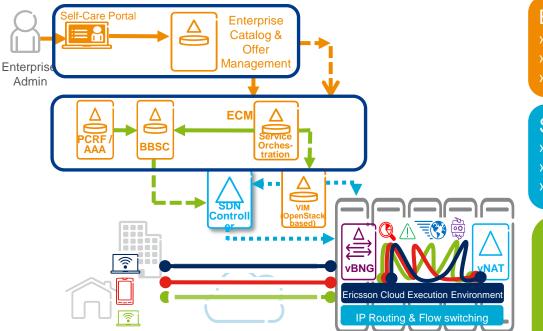

> Enterprise Considerations

- Maintain multiple isolated network slices
- Enforcing & Monitoring SLAs and KPIs
- Opening up networking services to the enterprise
- Providing a service catalogue to enterprises
- Requires a robust cloud platform to support, storage, voice and data services

VIRTUAL ENTERPRISE USE CACE S GROUP LIED TO ERICSSON CLOUD & NFV TARGET

Business Layer

- > Expose Services, SLA, KPIs to enterprise
- Triggers orchestration and network change
- A framework for efficient work flow for innovation

Services Layer

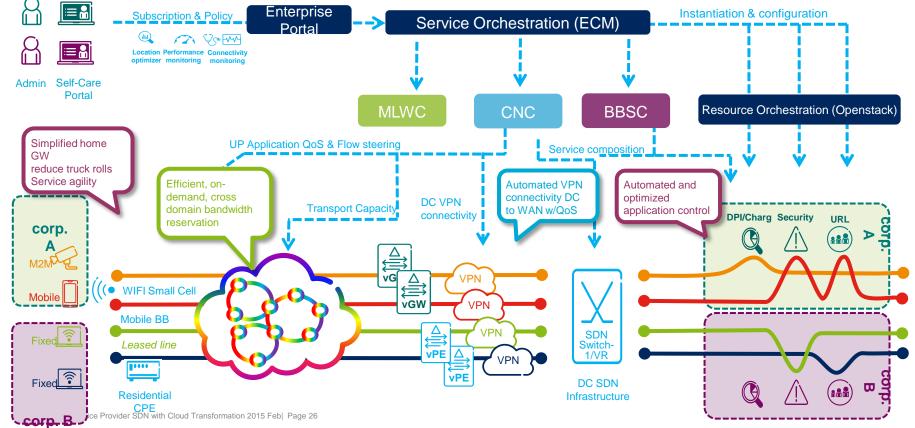

- > Resource Orchestration
- Policy management and control
- Statistical and Analytical Reporting

Resource Layer

- > Compute Resources
- Storage Resources
- Networking Resources
- Legacy Service chaining
- Granular Transport control

ALL TOGETHER... VIRTUAL ENTERPRISE CPE/GW WITH DYNAMIC TRANSPORT SETUP

AGENDA
